

Finishing Options

This guide will cover finishing options for your products. These options include services applied both before and after printing. *Not every option that we will cover is available in every catalog of each of the software programs.* This guide also has a complimentary Video Tutorial available online to further assist your ordering needs.

You will find the finishing options located on the Options Palette under the Size Options tab.

All options are selected by clicking the opening beside them and deselected in the same manner.

The **Texture** option offers the choice of either Pebble Texture or Irish Linen Texture. These textures are embossed on the prints and are offered on both the E Surface and Metallic prints.

Mounting Services include:

Standout Mount which involves having your print bonded to ¾" foam core with black edges and pre-punched holes on the back making it ready to hang.

With **Dry Mounting**, your print is mounted to a pressed board that is 3/8" thick. Framing is recommend with this product.

Canvas Stretcher Frame includes having your print bonded to canvas and then stretched over a frame. This frame is about ¾" thick. Framing is recommend with this product. The Pebble and Irish Linen textures are not available in conjunction with the Canvas Stretcher Frame. You may still opt to have them Lacquered sprayed.

We also offer **Gallery Wrapped Canvas** prints which you will find under the Sizes menu as the specialized cropping requires it be ordered in a different manner. This is covered in a separate guide and tutorial.

Spray, this is a lacquer product that is sprayed on the surface of the prints and is offered for the E Surface print only.

Paper Type: All prints will default to E Surface paper. You must select metallic if you choose to have your product printed on metallic paper. The E Surface paper has a luster finish whereas the metallic has a high-gloss finish.

Your image will default to the color of your image file, but you may easily choose to change the **Image Tone** to either Black and White or Sepia with this option. If you are ordering a product with multiple openings you will see multiple Image Tone options as well. The tone you choose will be reflected in the image on the layout area.

Borders are pre-set masks available in the software and will give your image a custom look. You will need to drop an image into the opening before the border is visible. You may also add a **Fill Color** to further customize the border.

Finishing services will only be displayed when available on the selected product.
